

## 2014-2015 Winter Storm Events

This is a general month-by-month overview of the 2014-2015 Winter Season, which covers November through March. The information below is compiled from a variety of different weather services, including the National Oceanic and Atmospheric Administration (NOAA), the National Weather Service, and several private weather services. These numbers and services are reported as accurately as possible from the information we have available. For any questions about an event or billing, please call the Blackshor office.

This is an explanation of what we include for each storm date:

**-Storm Event on:** What day the weather event took place on

**-Blackshor called the storm on at:** When precipitation starts to fall and Blackshor deemed (using weather services and from measurements taken in the field) there to be enough precipitation accumulation to start servicing lots. Pre-emptive salting may occur before precipitation actually starts.

**-Blackshor called the storm off at:** When Blackshor deemed (using weather services and reports from work sites) there was an end to the main precipitation. "Storm off" does not mean we are finished servicing lots, however.

**-Services performed:** What services were performed at a service site, including sidewalk shoveling and salting, lot plowing, and lot salting. Services performed vary from property to property, depending on your service contract as well as the precipitation received. Most time, services include work the day before, the day of, and the day after the event.

**- Precipitation:** The amount of snow or ice that falls determines what services we perform for each separate event, as well as what agreed upon terms are in your service contract.

Note: There may be days where we serviced properties and the dates may not be listed below. These services may include pre-emptive work before a storm or continual work after a storm.
